Where We Work

BRIEF | JUNE 8, 2020

Plastic Free Rivers and Seas for South Asia

Beach cleanup in Maldives. Photo: Parley for the Oceans

Overview

South Asia is the third-largest contributor to global plastic waste. It flows into rivers and ends up in oceans threatens development and has far-reaching economic, ecological, and health impacts.

The World Bank, Parley for the Oceans, and the South Asia Cooperative Environment Programme (SACEP) have formed a unique partnership to help the region curb its marine plastic pollution and ramp up eco-innovation to reinvent plastic use and production.

Plastic Free Rivers and Seas for South Asia will coordinate action and facilitate South Asia's transition to a circular plastic economy by encouraging investments and greater collaboration between the public and private sectors and across countries.
