Schneider Electric Brings Solar Power to Sun Chemical

Feb 9, 2017

By Editors of Power Engineering

Schneider Electric announced it has signed a power purchase agreement with Sun Chemical for the installation of a rooftop and carport solar array.

The array will produce an estimated 1.1 million kilowatt-hours of electricity per year, or more than 30 percent of the energy needed to power Sun's facility in Carlstadt, New Jersey.

Onyx Renewables will design, install, own and operate the arrays, and sell the produced electricity to Sun at lower than current utility rates.

"Our decision to build PV arrays at our Carlstadt facility is the latest example of how our own facility managers have been challenging themselves with regard to eco-efficiency," said Gary Andrzejewski, corporate vice president of environmental affairs at Sun Chemical. "We're excited about working with Schneider Electric on this project and we're pleased with how they have helped us develop a progressive approach to energy management — one that makes us a more sustainable and profitable business."

Sun chemical reached out to Schneider Electric for options to cut consumption costs. The two companies have collaborated since 2004, and together have brought sustainability consulting and energy procurement services to more than 40 Sun Chemical sites across the U.S. and Canada.
